BIOMED

Italian manufacturer of surgical sutures

01

BIOMED® **ABOUT US**

BIO SUD MEDICAL SYSTEMS Srl is an Italian company that produces medical devices. The company was established in 1984 gaining many years of experience in the biomedical sector and working with multinational companies, manufacturers of hospital items.

The production site is located in the new and modern settlement in the industrial district of Bari, with an area of approximately 2750 m²: 500 m² of these are used as offices, 250 m² as Clean Room reserved to the production and approximately 2000 m² as warehouse use.

Currently, **BIO SUD MEDICAL SYSTEMS Srl** is able to provide a wide range of medical devices and equipment to satisfy Hospitals, Clinics, Private Nursing Homes and Surgeons.

The commitment to a constant presence and professionalism on the provide territory and the continuous research for quality products at low prices led the company to decide to be directly involved in the production of medical devices through the registration of the **BIOMED®** brand.

BIO SUD MEDICAL SYSTEMS Srl is certified by DNV GL for ISO 13485 and ISO 9001, guaranteeing responsible management of the products and services provided in the medical field.

The adoption of the Quality Management System has been a strategic decision of the organization in order to show the company's ability in regularly providing to customers, effective processes and innovative products in compliance with customer and law's requirements.

The company's Quality goals are pursued through Quality Standards and Operating Procedures, clearly defined in the Quality Manual and rigorously applied throughout the company both as regards marketing strategies and production of the entire range of **BIOMED®** brand medical devices.

Constant retraining of all staff, puntual checks on products and a careful post-sales surveillance service are some of the actions implemented by **BIO SUD MEDICAL SYSTEMS Srl** to guarantee and constantly improve its quality standards.

The main purpose of the company is the full satisfaction of customers, doctors and health professionals; request who try to face and solve problems inherent to their work and guarantee the best care of their patients.

BIOMED®'s modern production activity takes place entirely in Italy, inside a clean room certified according to ISO standards and under constant control of the cleaning parameters.

The strategies are designed in order to obtain high quality products, through a careful global selection of both raw material suppliers and machinery.

The production processes are validated and subjected to constant checks with the support of laboratory activities.

All **BIOMED®** products are certified with CE 0373 marking and can rely on a considerable technological know-how, in order to achieve an high and constantly repeatable quality, thanks to the prestigious automations available.

Technological innovation, quality of the products and services, price competitiveness are some of the aspects that characterizes the company.

BIOMED® suture's range include absorbable and non-absorbable threads whose characteristics are showed in detail inside the catalog, together with other devices of our production specific for surgery, such as pledget, silicon and cotton loops, incision drapes and post-operative dressings.

Our range of products is in constant development and we invite you to visit our website to be always updated. The production logics oriented towards flexibility and customer satisfaction allow us to be available to customize the dimensions and characteristics of the products on request.

02 NEEDLES

*For all BIOMED® sutures, 300 series siliconized steel needles are used, the best solution on the market for its characteristics of **ductility, flexibility, penetration and resistance to breakage.***

Furthermore, **all the needles are drilled-end** and not channel-end type: they have a hole in the terminal part where the thread is inserted, guaranteeing both a **better needle/thread seal during the stresses in surgical practices**, and a **greater uniformity of the body of the suture greatly reducing bleeding due to more traumatic passages.**

The high quality of the needles used for BIOMED® sutures allows these needles to be **suitable for the most critical and demanding surgical specialties** thanks to the abstraction and the ability to penetrate which remain constant after several passages through the tissues.

All our needles are safely stored in a foam that allows operators to handle the packaging in **total safety** and the needle to keep **its characteristics intact.**

03

RATIO 1:1

*The welding between needle and thread necessarily involves a deformation of the needle as it is mechanically forced in order to **guarantee the tightness of the thread even where strong tractions are applied on the suture.***

The BIOMED® sutures are subjected to a process of shrinking **the needle attaching area which guarantees the least possible deformation and at the same time compliance with all the standards prescribed by the pharmacopoeia.**

A great deal of attention is paid to the choice of needles so that **the ratio is as close as possible to 1:1 between the outer diameter of the needle and that of the suture thread** to make the suture, with equal conditions and **safety**, **the least traumatic possible for organs and tissues**, where required.

04 DIFFERENT PACKAGINGS

Different types of packaging accompany our sutures according to the specific surgery to which they are produced.

A particular attention is paid to cardiac and vascular surgery where are used packaging which allow a considerable **reduction of the memory effect** of the monofilament and polyester multipack for valve replacement procedures.

The characteristics of the suture are reproduced on each packaging, from the external box up to the single sterile punch, to guarantee complete traceability and, at the same time, facilitating its identification.

Absorbable synthetic monofilament suture

SPECIFICS

- High tensile strength.
- Easy handling, flexibility and easy execution of the node.
- Atraumatic passage through the tissues due to the smooth surface.
- Excellent sliding through the tissues.
- Low thread memory.

SUTURE TENSILE STRENGTH

COLORED: 70% in one week; 40% in two weeks; 12% in three weeks; 3% in four weeks.

UNCOLORED: 80% in one week; 40% in two weeks; 15% in three weeks; 4% in four weeks.

CERTIFICATION

CE 0373 class III

COLOR

Violet or undyed (amber)

MOLECULE

Copolymer composed of 75% Glycolide and 25% ϵ -caprolactone (PGA-PCL)

COATING TYPE

Uncoated

INFORMATIONS

Bioshort sutures are indicated for the approximation and/or ligation of the soft tissues, blood vessels and muscles. They can be used in gastrointestinal, plastic and reconstructive surgery, urology, gynecology and obstetrics. Not indicated for cardiovascular tissues, on the central nervous system, microsurgery and ophthalmic surgery.

ABSORPTION

Happens by hydrolysis and is complete in about 90 - 110 days

STERILIZATION

Ethylene oxide

EXPIRE

5 years

Absorbable synthetic monofilament suture

BIOSHORT® BARBED

Knotless Wound Closure Device

BIOSHORT® BARBED is an absorbable barbed suture with a stainless steel series 302 needle and a barbing pattern with tissue closure and a stopper for fixation. Particularly useful for shortening the time of surgery and guaranteeing a better result.

HISTOPATHOLOGY TEST

Source: Samyang Biopharm

BIOSHORT® BARBED can offers several benefits compared to standard absorbable suture, one of which is the effect of **reducing the surgical closure time**.

SUTURE

Material	Poly (Glycolide-co-caprolactone) (75/25) Absorption period: 90-120 days
USP Size	4-0, 3-0, 2-0, 0
Color	 Undyed
Length	15 cm, 23 cm, 30 cm, 45 cm, 60 cm

GLYCO

Braided and coated absorbable synthetic suture

SPECIFICS

- High tensile strength.
- Atraumatic passage through the tissues due to the smooth surface.
- Easy handling and easy execution of the node.
- Excellent knot tying security.
- Excellent sliding through the tissues.
- Predictable absorption profile.

SUTURE TENSILE STRENGTH

Glyco sutures, after two weeks of post implantation, maintains approximately the 82% of the breaking strength and after three weeks about the 56%.

CERTIFICATION
CE 0373 class III

COLOR

Violet or undyed (beige)

MOLECULE

Polyglycolic acid (PGA)

COATING TYPE

Polycaprolactone and calcium stearate

INFORMATIONS

Glyco sutures are indicated for the approximation and/or ligation of the soft tissues, including the usage in ophthalmic procedures.

The safety and effectiveness of Glyco sutures in cardiovascular and neural tissue has not been defined.

ABSORPTION

Happens by hydrolysis and is complete in about 60 - 90 days

STERILIZATION

Ethylene oxide

EXPIRE

5 years

GLYCO

Braided and coated absorbable synthetic suture

BIOCRIL

Braided and coated absorbable synthetic suture

SPECIFICS

- High tensile strength.
- Atraumatic passage through the tissues due to the smooth surface.
- Easy handling and easy execution of the node.
- Excellent knot tying security.
- Excellent sliding through the tissues.
- Predictable absorption profile.

SUTURE TENSILE STRENGTH

Biocryl sutures, after two weeks post implantation, maintains approximately the 75% of the breaking strength and after three weeks about the 50%. After four weeks, it is about the 30% for USP 4/0 sutures, and less than 25% for USP 2/0.

CERTIFICATION

CE 0373 class III

COLOR

Violet or undyed (beige)

MOLECULE

Glycolic acid copolymer at 90% and lactic acid at 10% (Polyglactin 910)

COATING TYPE

Polyglactin 370 and calcium stearate

INFORMATIONS

Biocryl sutures are indicated for the approximation and/or ligation of the soft tissues, including the usage in ophthalmic procedures.

The safety and effectiveness of Biocryl sutures in cardiovascular and neural tissue has not been defined.

ABSORPTION

Happens by hydrolysis and is complete in about 56 - 70 days

STERILIZATION

Ethylene oxide

EXPIRE

5 years

BIOCRYL

Braided and coated absorbable synthetic suture

BIOCRYL RAPID

Braided and coated absorbable synthetic suture

SPECIFICS

- Short term absorbable multifilament.
- Atraumatic passage through the tissues due to the smooth surface.
- High tensile strenght.
- Smooth tissue passage.
- Minimized tissued trauma.
- Perfect knot security.

SUTURE TENSILE STRENGTH

Biocryl Rapid sutures, after five days from implantation, maintain about 60% and 70% of the breaking force. After 10 to 14 days the breaking strenght is at 0%.

COLOR

Undyed (beige)

MOLECULE

Glycolic acid copolymer at 90% and lactic acid at 10% (Polyglactin 910)

COATING TYPE

Polyglactin 370 and calcium stearate

INFORMATIONS

Biocryl Rapid is indicated for soft tissue approximation where only short wound support is required and rapid suture absorption is preferable. Thanks to their rapid absorption, Biocryl Rapid sutures can be used to heal skin wounds in pediatric surgery, episiotomies, circumcisions and wounds of the oral mucosa. Biocryl Rapid sutures can be used successfully in ophthalmic surgery.

ABSORPTION

Happens by hydrolysis and is complete in about 42 days

STERILIZATION

Ethylene oxide

EXPIRE

5 years

CERTIFICATION

CE 0373 class III

BIOLONG

Absorbable synthetic monofilament suture

SPECIFICS

- High starting tensile strength.
- Tensile strength loss perfect for the extended support of the wound.
- Easy handling, flexibility and easy execution of the node.
- Excellent knot tying security.
- Atraumatic passage through the tissues due to the smooth surface.
- Optimal sliding through the tissues

SUTURE TENSILE STRENGTH

Biolong sutures, after two weeks post implantation, has a breaking resistance approximately to the 75% of the initial one, that after four weeks becomes a little less than 70%. In six weeks, the tensile strength results to be between 55% and 60%.

CERTIFICATION

CE 0373 class III

COLOR

Violet or Undyed

MOLECULE

Polydioxanone

COATING TYPE

Uncoated

INFORMATIONS

Biolong sutures are indicated for the approximation and/or ligation of the soft tissues, including use in pediatric cardiovascular surgical procedures, microsurgery, ophthalmic and orthopedic surgery. These sutures are particularly useful if you search for an absorbable suture which can offer extended support to the wound (up to six weeks).

ABSORPTION

Happens by hydrolysis and is complete in about 180 - 220 days

STERILIZATION

Ethylene oxide

EXPIRE

5 years

BIOLONG

Absorbable synthetic monofilament suture

BIOLONG® BARBED

Knotless Wound Closure Device

BIOLONG® BARBED is an absorbable barbed suture with a stainless steel series 302 needle and a barbing pattern with tissue closure and a stopper for fixation. Particularly useful for shortening the time of surgery and guaranteeing a better result.

HISTOPATHOLOGY TEST

Source: Samyang Biopharm

SUTURE

Material	Polydioxanone (PDO) Absorption period: 180-210 days
USP Size	4-0, 3-0, 2-0, 0, 1
Color	 Violet
Length	15 cm, 23 cm, 30 cm, 45 cm, 60 cm

BIOLENE

Non-absorbable synthetic monofilament suture

SPECIFICS

- High tensile strength.
- Easy handling, flexibility and easy execution of the node.
- Excellent knot tying security.
- The uniform size and smooth surface of the suture permit atraumatic passage and excellent sliding through the tissues.
- Low thread memory.

SUTURE TENSILE STRENGTH

Biolene suture is non-absorbable, so it isn't known any substantive change in tensile strength.

ABSORPTION

Non-absorbable

STERILIZATION

Ethylene oxide

EXPIRE

5 years

PACKAGING

The Biolene sutures are also offered in a dedicated packaging to prevent the memory effect.

COLOR

Blue or Undyed

MOLECULE

Polypropylene

COATING TYPE

Uncoated

INFORMATIONS

Biolene sutures are indicated for the approximation and/or ligation of the soft tissues, including the use in cardiovascular surgery and neurosurgery. Thanks to their specifics, they result particularly indicated for the closure of the skin and in plastic and reconstructive surgery.

Custom sizes are available on request.

BIOLENE

Non-absorbable synthetic monofilament suture

NOVABIO

Non-absorbable synthetic monofilament suture

SPECIFICS

- High tensile strength.
- Easy handling, flexibility and easy execution of the node.
- Excellent knot tying security.
- The uniform size and smooth surface of the suture permit atraumatic passage and excellent sliding through the tissues and the most resistant cardiovascular prosthesis.
- Low thread memory.

SUTURE TENSILE STRENGTH

Novabio suture is non-absorbable, so it isn't known any substantive change in tensile strength.

ABSORPTION

Non-absorbable

STERILIZATION

Ethylene oxide

EXPIRE

5 years

COLOR

Blue

MOLECULE

Polyvinylidenefluoride

COATING TYPE

Uncoated

INFORMATIONS

Novabio is indicated for suturing blood vessels and soft tissues, for neurosurgery and ophthalmic surgery. Its characteristic of long durability makes it particularly suitable for all minimally invasive surgical procedures, in vascular and cardiac surgery.

Custom sizes are available on request.

BIOTEX

Synthetic non-absorbable monofilament suture

SPECIFICS

- Porous microstructure of the wire that allows for quick attachment of fabrics.
- Reduced friction with fabrics.
- Extremely easy to handle, smooth and easy to perform knots.
- Excellent knot-holding safety.
- Constant tensile strength over time.
- Chemically inert.

SUTURE TENSILE STRENGTH

Biotex shows no significant loss of strength over time.

COLOR

Undyed

MOLECULE

Polytetrafluoroethylene (PTFE)

COATING TYPE

Not coated

INFORMATIONS

Biotex is indicated for the approximation and / or ligation of tissues soft including cardiovascular, oral, general surgery and dura mater repair. Biotex suture thread is also indicated for repair or replacement of the tendon cords. Due to its characteristics, it is recommended for use in cases where is important to reduce suture line bleeding and reduce the times of hemostasis.

ABSORPTION

Not absorbable

STERILIZATION

Ethylene oxide (ETO)

GAUGES

USP da 7/0 a 1. EP da 0,5 a 4

POLYBIO

Braided and coated non-absorbable synthetic multifilament suture

SPECIFICS

- Constant tensile strength through time.
- Easy handling, flexibility and easy execution of the node.
- Excellent knot tying security.
- The special coating of the suture permits atraumatic passage and excellent sliding through the tissues.
- Maximum reliability in the application of prothesis and in the approximation of tissue subjected to tension.
- Reduced capillarity.

SUTURE TENSILE STRENGTH

Polybio doesn't show significant loss of strength through time.

ABSORPTION

Non-absorbable

STERILIZATION

Ethylene oxide

EXPIRE

5 years

COLORS

Green or white (undyed)

MOLECULE

Polyester

COATING TYPE

MED2174 silicon or wax

INFORMATIONS

For its particular characteristics, Polybio sutures are especially suitable for cardiovascular surgery and suturing of the skin. It can also be employed in the approximation and/or ligation of the soft tissues, in ophthalmic and orthopedic surgery, and for neural tissues.

Custom sizes are available on request.

CERTIFICATION

CE 0373 class III

NYLON

Non-absorbable synthetic monofilament suture

SPECIFICS

- High tensile strength.
- Easy handling, flexibility and easy execution of the node.
- Excellent knot tying security.
- The uniform size and smooth surface of the suture permit atraumatic passage and excellent sliding through the tissues.
- Low thread memory.

COLORS

Blue or Black

MOLECULE

Polyamide 6 or Polyamide 6-6

COATING TYPE

Uncoated

INFORMATIONS

Nylon sutures are indicated for the approximation and/or ligation of the soft tissues, including use in cardiovascular, ophthalmic, plastic, orthopedic surgery, in microsurgery and suturing of the neural tissue.

SUTURE TENSILE STRENGTH

Nylon suture is non-absorbable. However, due to its hydrolytic process, it may gradually lose its tensile strength through time.

ABSORPTION

Non-absorbable

STERILIZATION

Ethylene oxide

EXPIRE

5 years

CERTIFICATION

CE 0373 class III

NYLON

Non-absorbable synthetic monofilament suture

BIOSILK

Braided and coated non-absorbable natural suture

SPECIFICS

- High tensile strength.
- Easy handling, flexibility and easy execution of the node.
- Excellent knot tying security.
- The uniform size and smooth surface of the suture permit atraumatic passage and excellent sliding through the tissues.
- Reduced capillarity.

SUTURE TENSILE STRENGTH

Biosilk suture is non-absorbable, however, the progressive degradation of its protein fibers, leads to a gradual loss of tensile strength through time.

ABSORPTION

Non-absorbable

STERILIZATION

Ethylene oxide

EXPIRE

5 years

COLORS

Black or Blue

MOLECULE

Fibroin: protein derived from the silkworm Bombyx-mori species

COATING TYPE

Silicon or wax

INFORMATIONS

Biosilk sutures are indicated for approximation and/or ligation of the soft tissues, skin and subcutaneous layers.

Especially suitable for cardiovascular, ophthalmic, dental surgery and in neurosurgery.

CERTIFICATION

CE 0373 class III

BIOFELT

Pledgets

Biofelt pledgets are devices made of Polytetrafluoroethylene (PTFE).

Available in two different type, **soft or hard**, they are used for the **reinforcement of sutures and to support the load**.
On host tissue, which could otherwise be damaged.

Biofelt pledgets are steril, for single use, implantable and produced in different shapes and sizes with soft or hard consistency, to deal with different procedural requirements.
Custom sizes are available on request.

BIOLOOP

Surgical laces for suspension and differentiation of organs

BIOLOOP SILICON

is a flexible silicone tube, used during surgical procedures as a retraction tube to harness, isolate and mark arteries, veins and other vessels. It is available in a free-wire version or with a pre-assembled needle, in different sizes and colors that allow immediate identification.

BIOLOOP COTTON

is a sterile ribbon in white cotton, used during surgical procedures for the suspension and traction of organs or for ligation of the umbilical cord of the newborn.

BioLoop Sin all its variants does not contain natural rubber latex. Custom sizes available on request.

BIOINCISE

Drape for surgical incision

Bioincise is a drape for surgical incision, composed of polyurethane film. It acts like a barrier to protect the incision area from external contaminations.

Bioincise is coated with a special adhesive that ensures maximum performance during all surgical procedures, adhering securely to the skin while guaranteeing an high transpiration. It is thin, transparent, easy to apply and impermeable to body fluids or other fluids present during the surgery.

Available in different sizes. Bioincise doesn't contain latex.

BIOPROOF

Waterproof adhesive dressing

Bioproof guarantees maximum comfort and adaptability to every anatomic parts, acting like a second skin.

Bioproof is a sterile, transparent, thin and waterproof adhesive dressing. The Polyurethane film allows a huge skin transpiration and a high protection against water and external contaminations.

Bioproof is also available in the intravenous dressing version, especially indicated for a secure fixing of the intravenous cannulas, and in other two versions:

BIOPROOF INVISIBLE
with the absorbant central pad in skin color;
BIOPROOF WITHOUT PAD
entirely transparent to allow the constant monitoring of the healing process.

Bioproof doesn't contain latex.

BIODRESS

Sterile dressing

Biodress is a sterile dressing in soft non-woven fabric, highly absorbent and transpiring. The central pad has a nonstick layer that prevents the release of residues and facilitate the healing process. Rounded angles make it comfortable to stick it and painless to remove it on every parts of the body. The Pressure Sensitive adhesive system is hypoallergenic and not irritating, on the most sensible skins too.

Biodress is also available in the intravenous dressing version, especially indicated for a secure fixing of the intravenous cannulas.

Biodress doesn't contain latex.

IIA CLASS MEDICAL DEVICE
classified by 93/42/CEE directive.

CODE	DIMENSIONS (cm)	PCS. PER BOX
BD057CHH	5 x 7 catheter	200

BIOPTICAL

Sterile adhesive dressing

Bioptical is a sterile adhesive dressing, useful in cases in which it is necessary to provide an integral protection of the eye to facilitate the healing process, in particular following surgery, trauma or other pathological conditions. The anatomical shape and the carvings allow an optimal adhesion to the face, even near the nose, guaranteeing maximum comfort. The support in soft non-woven fabric allows skin perspiration, reducing the problem of sweating.

The Pressure Sensitive adhesive is hypoallergenic, free of natural rubber latex and non-irritating to the skin. The detachment is painless even in case of prolonged use. The highly absorbent central pad does not release residues and is equipped with a non-stick layer that prevents adhesion to the wound.

Bioptical can be used in combination with ointment-based medications, creams or ophthalmic ointments. Does not contain latex.

TRACHEOTOMY AND DRAIN ABSORBENT PADS

Sterile dressings for tracheotomy and drains

The pad is cut and shaped in order to easily adapt to the tracheostomy or drainage tube affected area, guaranteeing maximum comfort for the patient. The central layer, composed by non-woven viscose and polypropylene fabric, thanks to its highly absorbant properties, keeps the wound surface dry from secretions and exudates, reducing the risk of infections. It also act as a barrier against humidity, allowing at the same time, an effective vapor transfer. The layer in contact with the skin is made of aluminized polyethylene. This highly porous material allows an excellent skin transpiration and ensuring skin dryness. At the same time the non-adhesion of the pad to the peristomal area and to the tracheostomy tube or drainage, reduces the trauma for the patient during the use and the removal.

Absorbent Pads don't contain latex.

The sterile aluminized non-woven pads perform an extremely important function as a barrier against bacterical contamination.

Absorbent dressings are available in the following variants:

BIODREN PAD

particularly indicated for small or medium-scale drainage, pediatric tracheotomy, and wounds caused by infusion catheters in proximity of sutures;

BIOTRAC

especially suitable for post tracheostomy and for considerable entity drainages;

BIOTRAC COMFORT

indicated for post tracheostomy and for considerable entity drainages. Its peculiar shape enables the pad to be less visible underneath the garments, guaranteeing a greater comfort to tracheostomy patients.

BIOMED®

*BIOMED® is a trademark born by the thirty years experience that **Bio Sud Medical Systems** accomplished in the medical devices segment.*

The modern production activity totally takes place in Italy, into a clean room certified by **ISO standard** and under constant and periodical cleaning parameters controls.

Strategies are planned to obtain exclusively **high-quality products**, through a careful selection of providers, raw materials and production machineries on a global scale. The production processes are validated only after constant laboratory controls.

The production structure is a combination of technological automation and specialized skilled manpower, always ready to be at your service.

All BIOMED® sutures are certified by the ISS (Istituto Superiore della Sanità) with CE 0373, belong to Class III and are sterilized with Ethylene Oxide.
The company is also certified with the **DNV-GL for ISO 13485 and ISO 9001.**

BIOMED® is a Bio Sud Medical Systems s.r.l. registered trademark
